

**\*\*EXISTING PATIENT INFORMATION\*\***

Patient Last Name: \_\_\_\_\_ First Name: \_\_\_\_\_ DOB: \_\_\_\_\_ Gender: \_\_\_\_\_

Email Address: \_\_\_\_\_ Cell Phone: \_\_\_\_\_

Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip: \_\_\_\_\_

**PLEASE STATE CURRENT INSURANCE INFORMATION**

Medical Insurance: \_\_\_\_\_ ID#: \_\_\_\_\_

Vision Insurance: \_\_\_\_\_ Policyholder last 4 SSN: \_\_\_\_\_

Policyholder Name & DOB: \_\_\_\_\_

**PLEASE LIST ANY HEALTH/MEDICAL CHANGES SINCE LAST VISIT:** \_\_\_\_\_

**DIGITAL RETINAL IMAGING**

Hazel Family Eyecare uses advanced technology to monitor early signs of ocular disease within your eye. Our doctors recommend the complete wellness exam yearly for diagnostics and comparative documentation.

Costs are typically not covered by insurance. Please select one.

**\$39.00 - Optos Retinal Imaging only**

Optos is a quick photo that captures more than 80% of your retina in a single panoramic image, something no other retinal imaging device is capable of. This larger capture is clinically important as the peripheral retina more frequently has thinning and tears that can lead to a retinal detachment. Optos also aids in early detection of systemic diseases such as hypertension, diabetes, some cancers, stroke and autoimmune disorders. **Likely, dilation will be eliminated saving you time, blurriness and light sensitivity.** (Certain circumstances may still require dilation.)

**\$39.00 - OCT Retinal Scan only (similar to an MRI)**

OCT (Optical Coherence Tomography) is an imaging exam that utilizes light waves to scan the macular area in the back of the eye, providing a cross-sectional view of the nine layers of the retina. **The OCT detects early signs of macular degeneration,** fluid accumulation and central retinal detachments which may aid with early treatment options.

**\$55.00 – As recommended, I select both services** for the most comprehensive overall eye health exam.

Contrary to recommendations, I decline the above options.
